

Question: "In paragraph 3.2.2.2, the requirement states 'High Frequency motion (jitter) shall be held to within 0.01 deg (3 sigma) from peak to peak over frequencies between 1 and 25 Hz.' This was a change from version 0.84 of the TRD where the required performance was 0.03 deg (1 sigma) and not defined as peak to peak.

- Should the current requirement be 0.1 deg (3 sigma) vs. 0.01 deg (3 sigma)?

Answer: The requirement is correct as stated in Paragraph 3.2.2.2 of the TRD.

Question: Do you require the proposal for the Delivery Order #1 Space Vehicle production unit to be fully compliant with the TRD?

Answer: The Delivery Order #1 Space Vehicle production unit must be fully compliant with all the TRD requirements. The only exception is tailoring of the Standards and Specifications as outlined in L 2.1.6.2 of the RFP.
